Today's presentation

What is the NIH Public Access Policy?

Steps in the process

Common pitfalls

Planning for compliance

Continuing support

Update on emerging policies from other funders

What is the NIH Public Access Policy?

“...ensures that the public has access to the published results of NIH-funded research. It requires scientists to submit final peer-reviewed journal manuscripts that arise from NIH funds to the digital archive PubMed Central...”

The process, generally speaking

NIH-funded article
accepted for
publication

Article submitted
to NIHMS system

PMC ID# assigned:
compliance
achieved

WHAT...is subject to the policy?

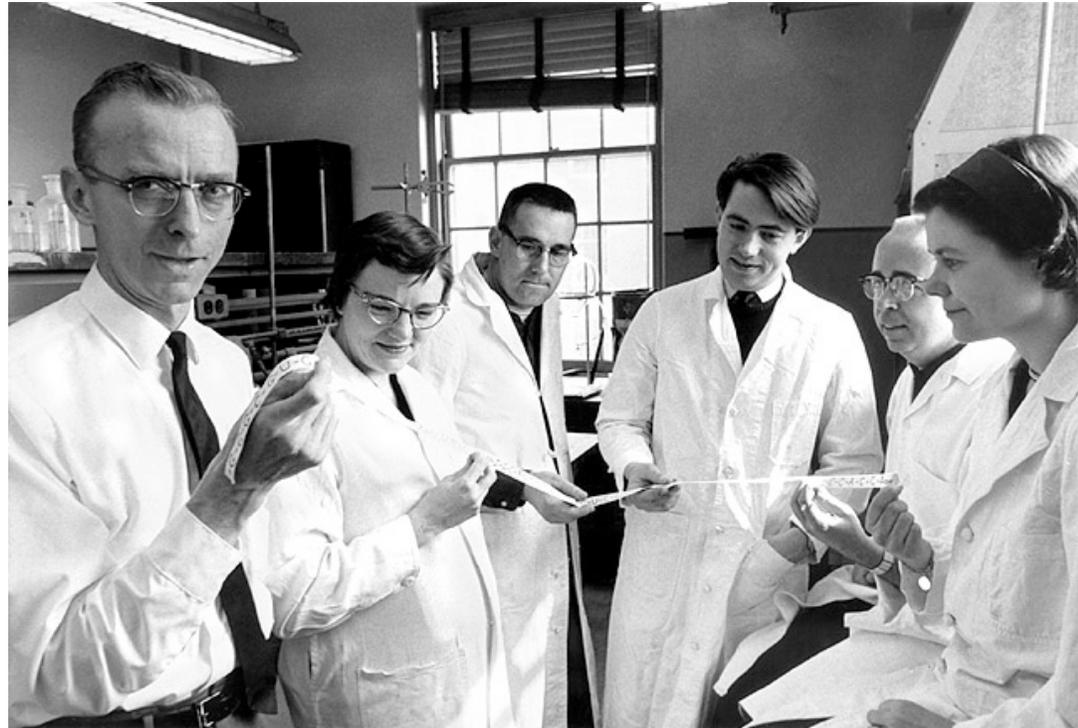

Peer-reviewed articles
directly funded by an NIH award

WHAT...should be submitted?

Final version of a peer-reviewed article to be submitted for publication, **after author modifications from the peer-review process and **before journal copy-editing and formatting.** (the “post-print”)**

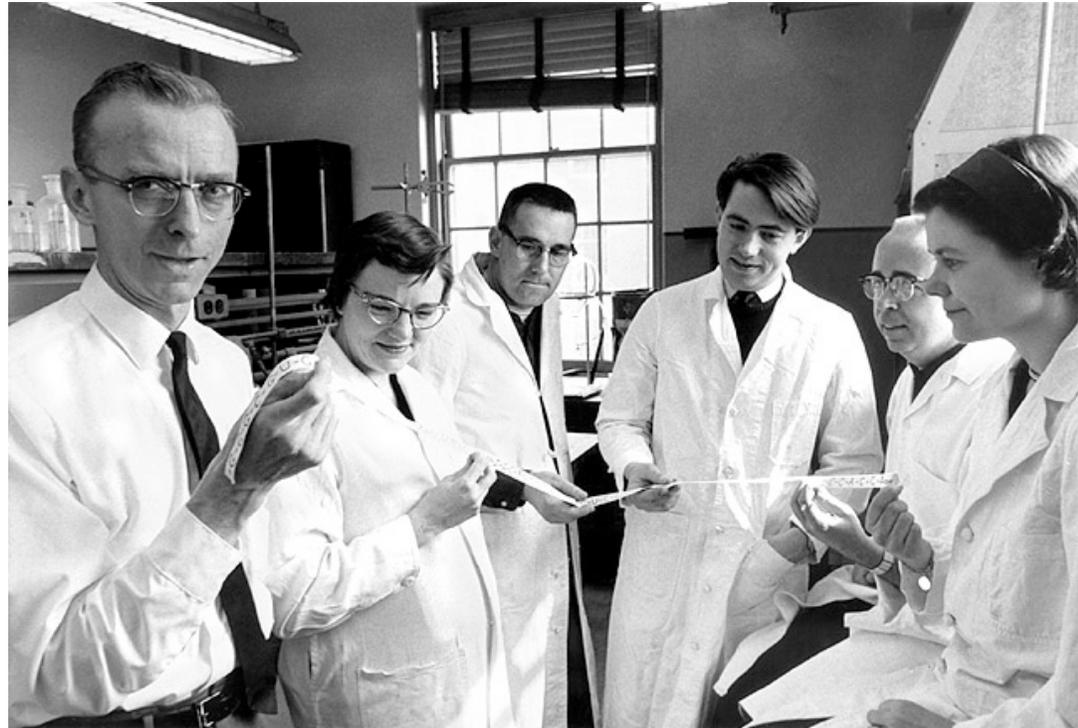

WHO...is responsible for compliance?

The principal investigator on the NIH award

WHO...can start the submission process?

Anyone!

WHEN...should I submit a paper?

Immediately
upon
acceptance
of the paper

WHEN...must the paper have a PMCID?

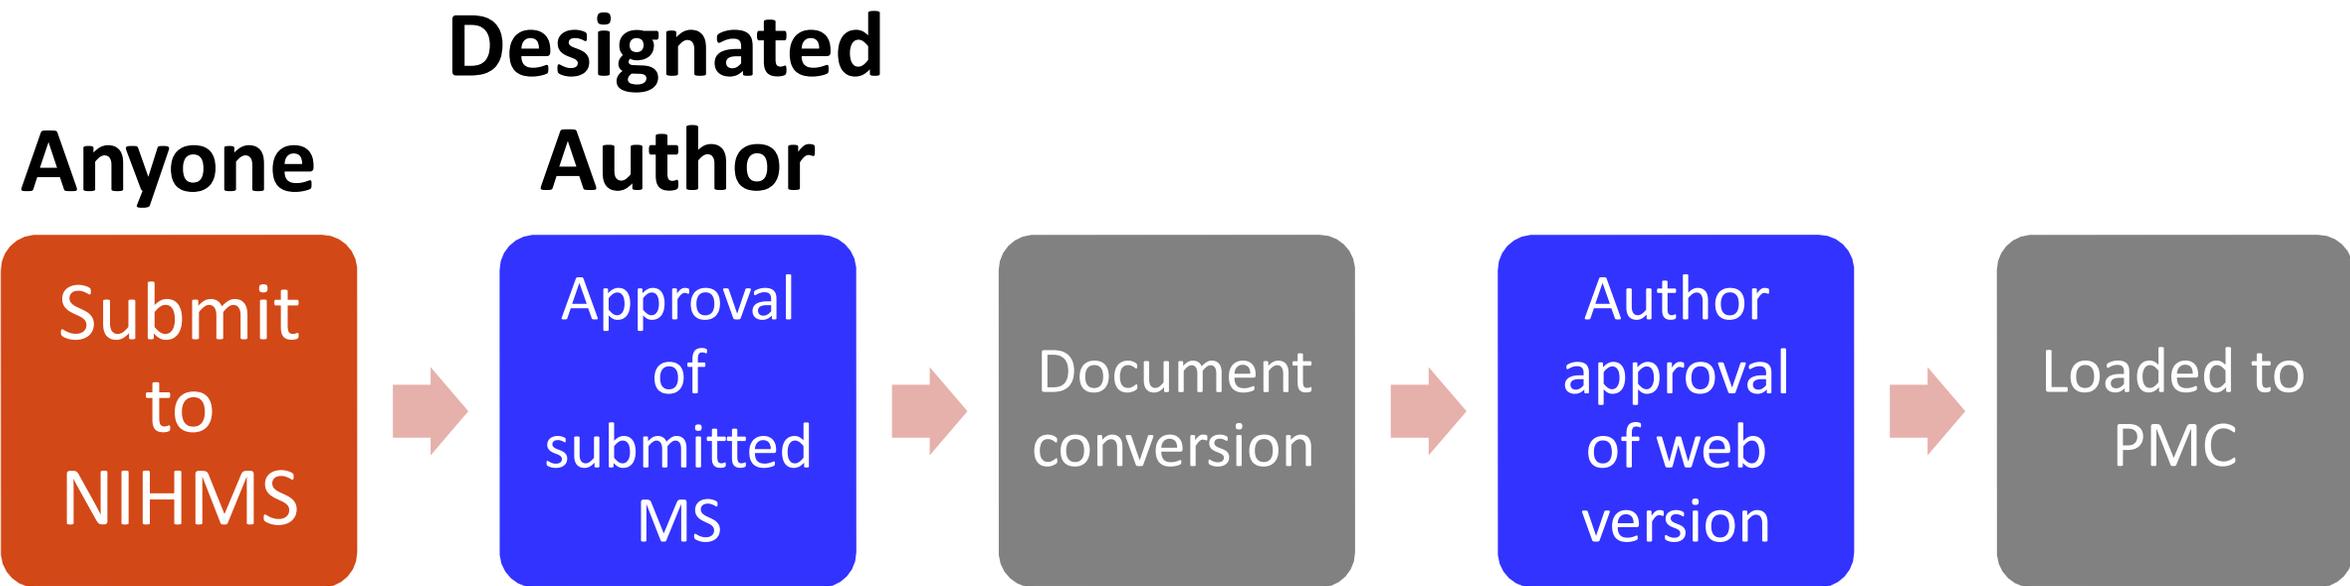

No more than
3 months
after the
publication
date

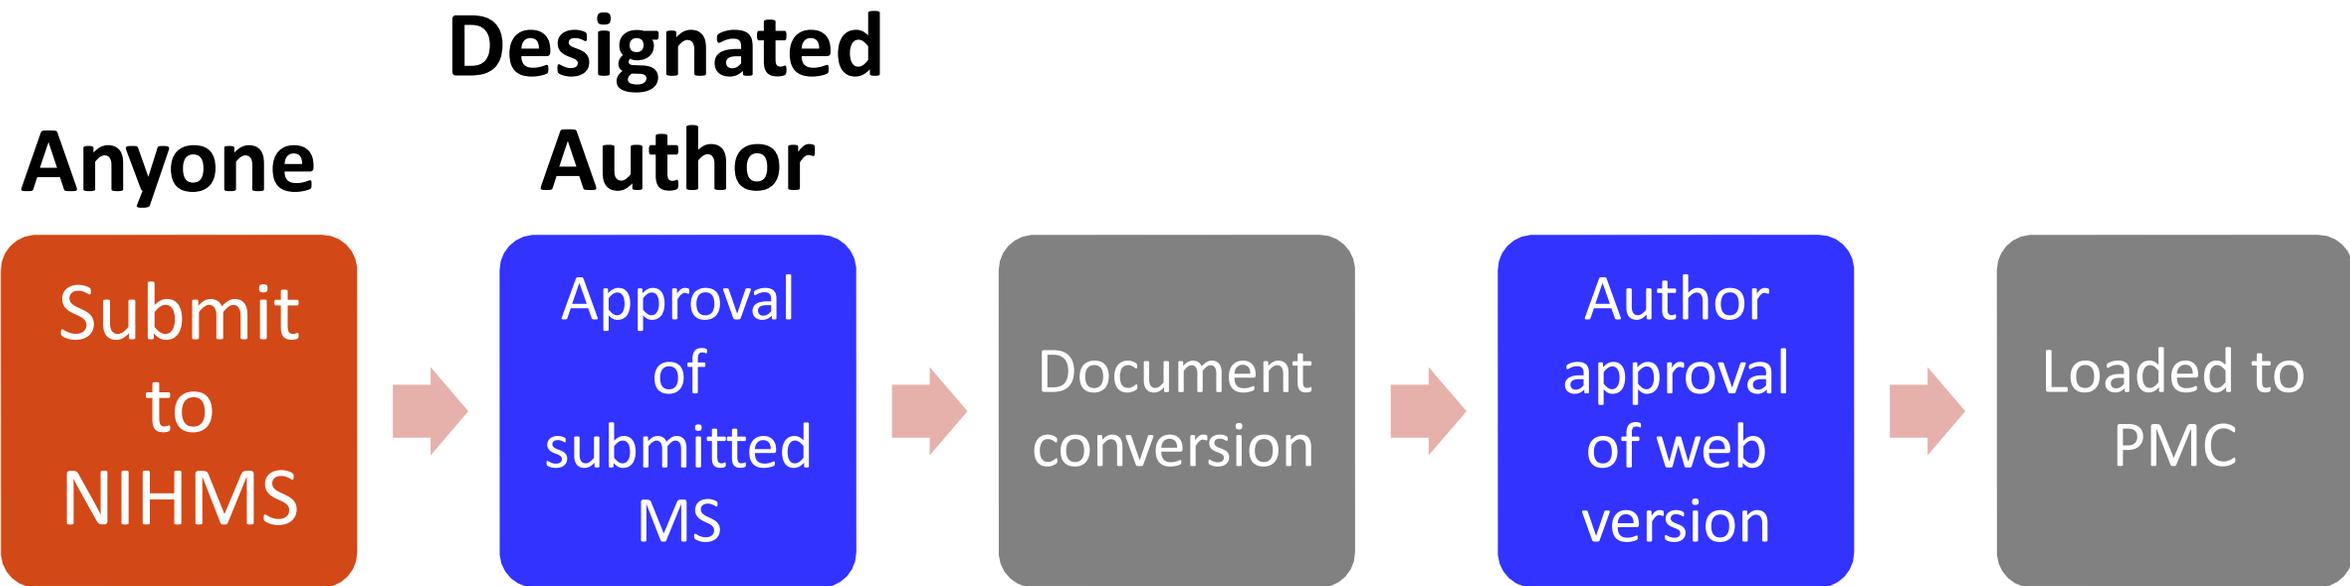

WHEN...must a paper be publically accessible?

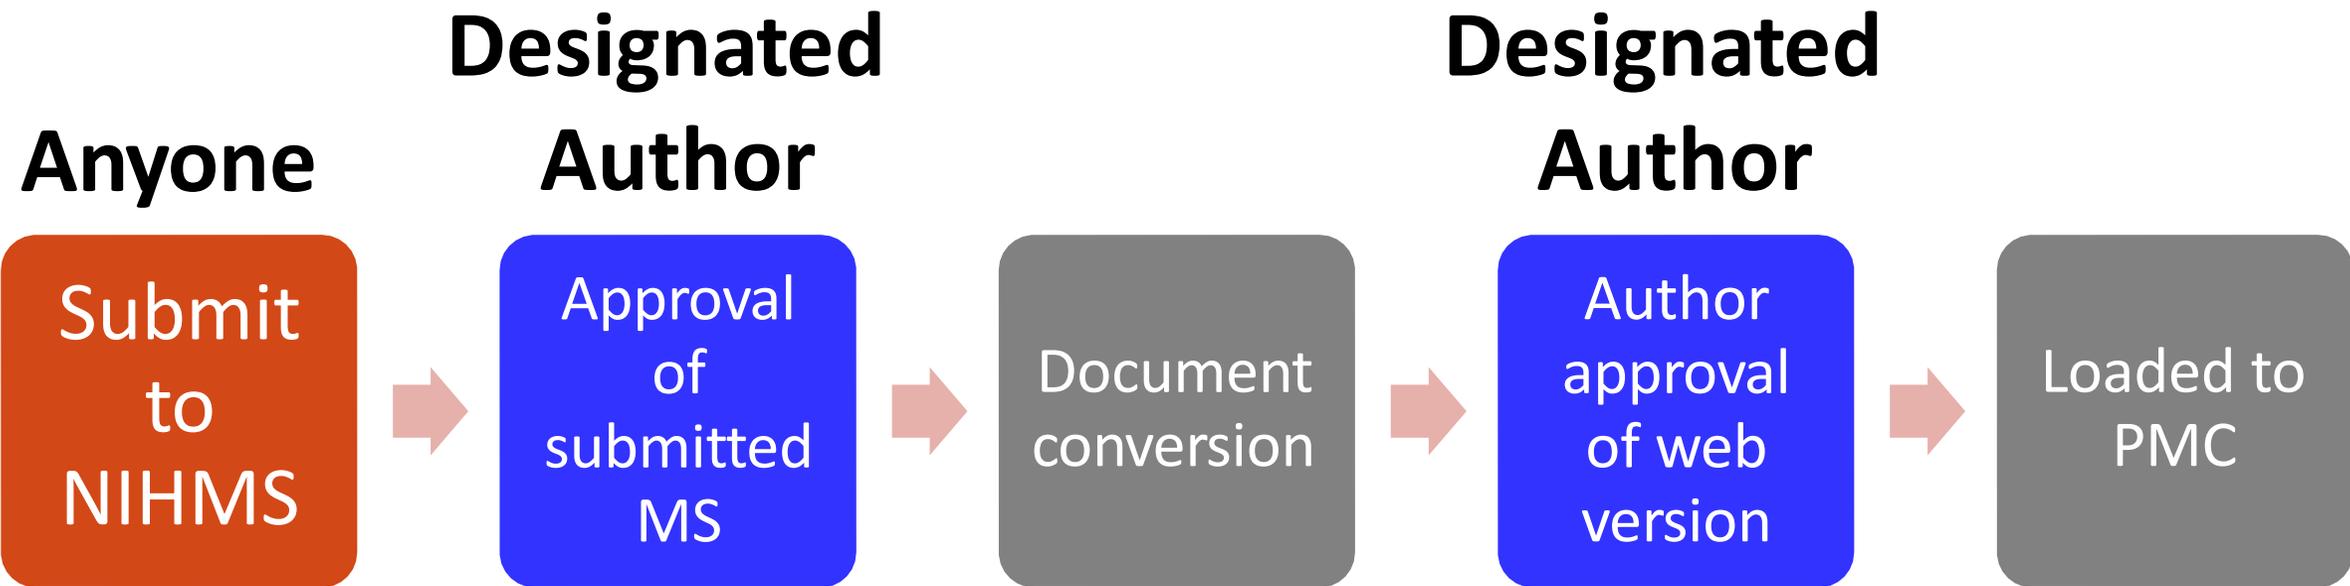

No more than
12 months
after the
publication
date

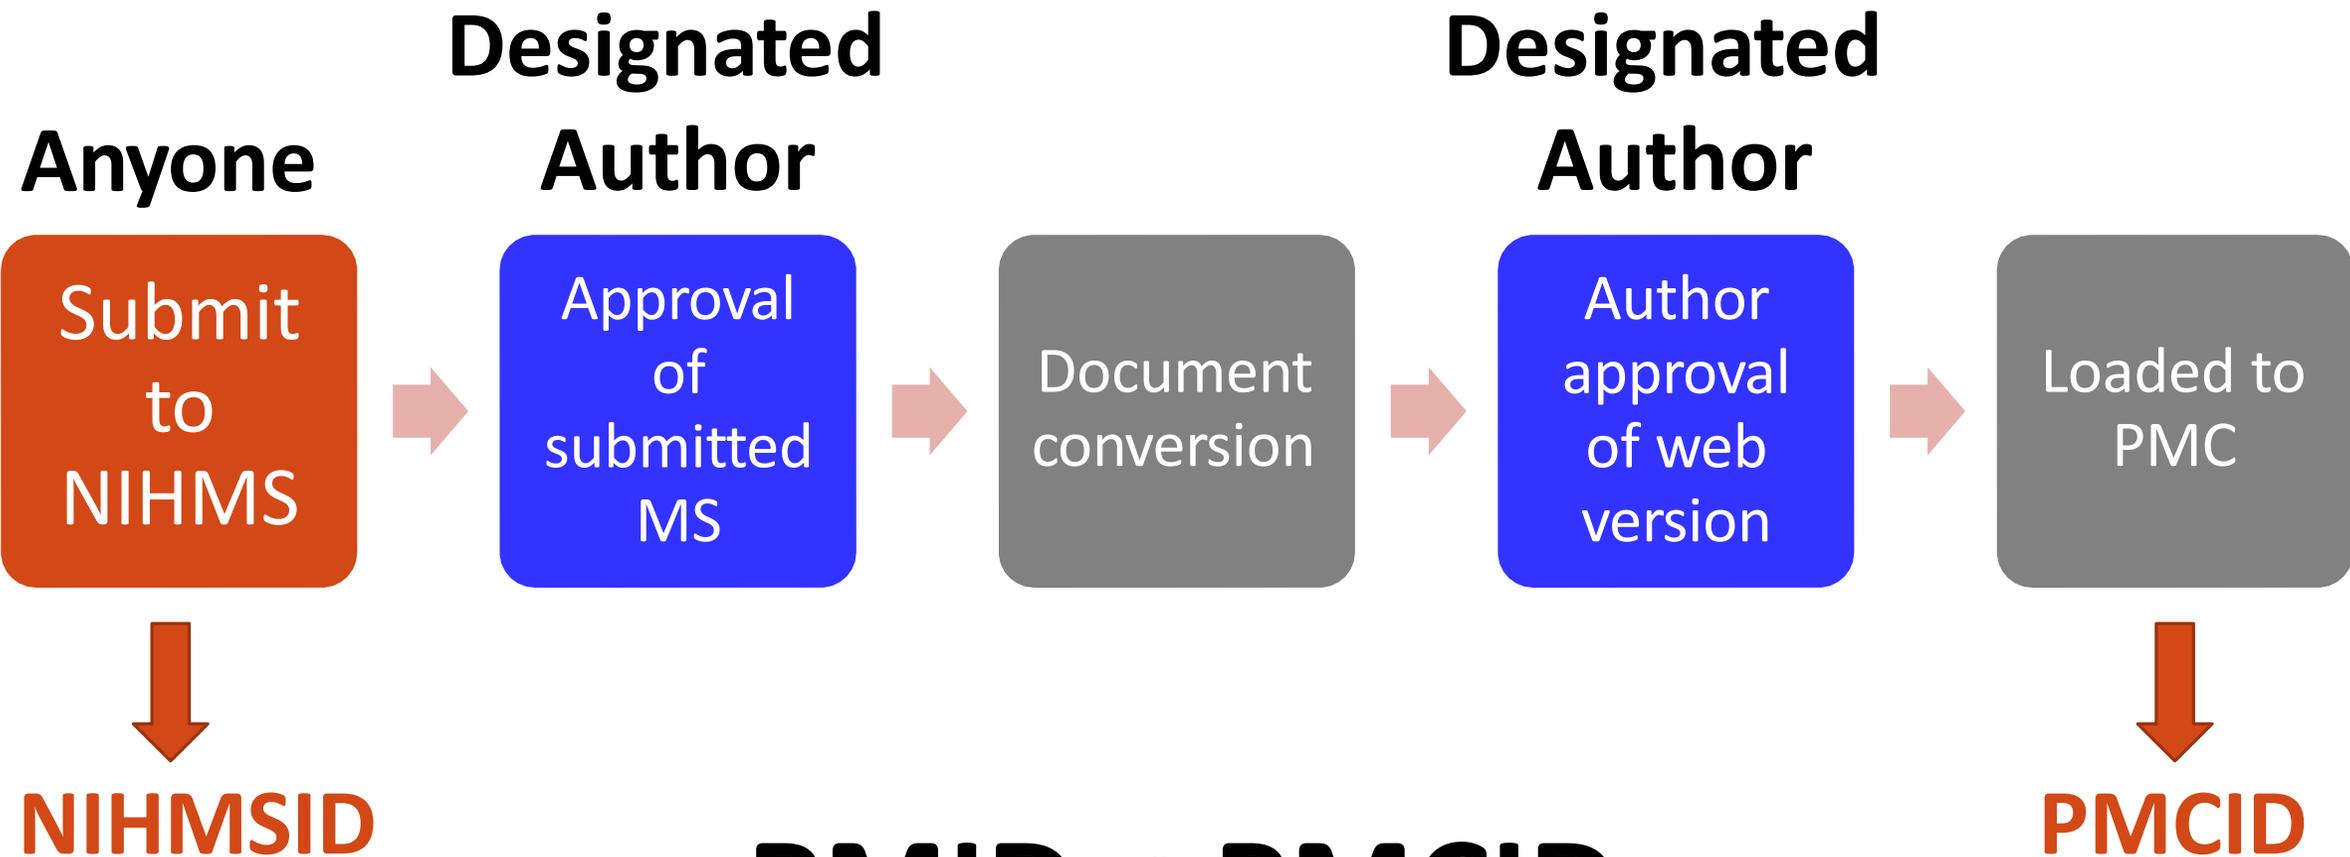

Anyone

PMID ≠ PMCID

Common pitfalls

An approval step email was missed

The designated author is no longer available

The 'non-compliant' paper should be exempt

The journal didn't submit the article to NIHMS

Articles reported without PI's awareness

Planning for compliance

Understand your copyrights and the journal's submission process

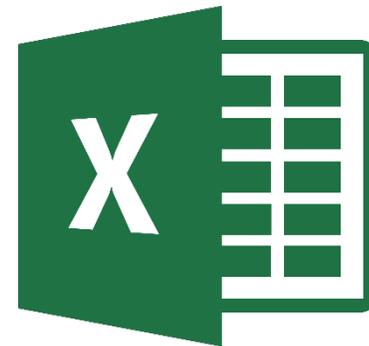

Be sure the journal's author agreement allows for compliance

Let the publisher know the work is subject to the NIH policy

Be aware of the different journal submission methods

Planning for compliance

Keep track of your final, peer-reviewed documents

Planning for compliance

Manage and *monitor* your publications in My Bibliography

Public access policy developments

Major federal funders required to have policies to ensure public access to data *and* publications

EXECUTIVE OFFICE OF THE PRESIDENT
OFFICE OF SCIENCE AND TECHNOLOGY POLICY
WASHINGTON, D.C. 20502

February 22, 2013

MEMORANDUM FOR THE HEADS OF EXECUTIVE DEPARTMENTS AND AGENCIES

FROM: John P. Holdren 
Director

SUBJECT: Increasing Access to the Results of Federally Funded Scientific Research

1. **Policy Principles**

Public access policy developments

Common policy elements for **publications**

- Applicable content: agency-funded, peer-reviewed, publicly releasable (mostly)
- Version to submit: Final, peer-reviewed and edited (or publisher copy, with permission)
- Allowable embargo: up to 12 months from date of publication
- Designated repository: usually specified by agency; open-access publishing is not a requirement and does not ensure compliance
- Implementation dates: most expected to roll out this year, if not already in effect

There may be some details specific to particular agencies (required file format, ORCID iD, DOI).

Public access policy developments

Common policy elements for **data**

- Grant proposal requirements: data management plan
- Applicable content: agency-funded, publicly releasable digital data; sometimes limited to data underlying publications
- Allowable embargo: usually end of award, but allowances may be made for IP concerns
- Designated repository: often not specified; may have a central data catalog
- Implementation dates: most expected to roll out this year, if not already in effect

There are often differences and details specific to particular programs within agencies.
